DEV JUNEJA

+91-9911522188 | devjuneja789@gmail.com | DevJuneja | devjuneja789 | Portfolio | devjuneja18

AI/ML Engineer in training, building RAG, fine-tuning, and transformer-based projects; full-stack developer shipping production-ready apps.

EDUCATION

Vellore Institute of Technology (VIT Bhopal) Aug. 2023 – May 2027
B.Tech in Computer Science and Engineering (AI & ML) | *CGPA: 7.75* Bhopal, MP

EXPERIENCE

FPA AI Solutions Oct. 2026 – Present
AI Product Engineering Intern Remote, India

- Engineered proprietary enterprise AI products and autonomous agentic workflows, architecting modular LLM orchestration pipelines, context-aware prompt templates, and automated evaluation harnesses
- Spearheaded website optimization across SEO, AEO, and GEO by improving semantic entity graphs and schema markup to strengthen brand discovery across Google, Perplexity, and ChatGPT Search

PROJECTS

Agentic Commerce | *React, TypeScript, Express, MongoDB, PayPal Orders v2, MCP* | Live Demo | GitHub

- Developed an **autonomous e-commerce storefront** where shoppers query inventory in natural language; integrated **Gemini 2.5 Flash** to parse intent, rank catalog items, and drive safe purchasing with full audit telemetry
- Architected a resilient **PayPal Orders v2** checkout pipeline featuring **atomic MongoDB stock reservations** to prevent overselling during concurrent traffic, complete with webhook reconciliation and post-redirect capture
- Engineered multi-tier **spending guardrails** with a **Human-in-the-Loop review queue** ($100 approval gate, $500 hard safety cap) and implemented an **MCP (Model Context Protocol)** server exposing safe checkout tools to external AI agents

RLM-Python Recursive Language Models | *Python, Gemini API, REPL Sandbox* | GitHub

- Built an independent Python implementation of **Recursive Language Models (RLM)**, treating long context as external memory instead of stuffing it into every prompt
- Designed a **Python REPL sandbox** where a root LLM programmatically inspects, slices, and searches a stored context, dispatching recursive sub-LLM calls (`llm_query`, `llm_query_parallel`) only on relevant snippets
- Implemented an async engine with Gemini-based root/sub drivers and a **Needle-in-a-Haystack benchmark** to evaluate long-context retrieval accuracy

Brainly AI Second Brain | *MERN, TypeScript, Tailwind, JWT, pgvector, OpenAI* | Live Demo | GitHub

- Built a full-stack **AI-powered knowledge base** to save YouTube videos, tweets, and links — with semantic search via **RAG (Retrieval-Augmented Generation)**
- Integrated **pgvector** with PostgreSQL to store and query embeddings; content is chunked, embedded, and retrieved contextually to answer natural language queries over saved notes
- Architected a **monorepo** with React + Tailwind frontend and Node.js + Express backend; implemented **JWT auth**, RESTful APIs, and Mongoose schemas

SKILLS

Languages : Python, JavaScript, TypeScript, C++, SQL

Frameworks & Libraries : React.js, Node.js, Express.js, Next.js, Tailwind CSS, Vite, FastAPI, PyTorch, Scikit-learn, LangChain

Databases & ORMs : MongoDB, PostgreSQL, Prisma, Mongoose, pgvector

Tools & Platforms : Git, GitHub, Docker, Postman, PayPal REST APIs, AWS, GitHub Actions, Linux/Bash, VS Code

AI & Agentic Systems : Model Context Protocol (MCP), Autonomous Agents, Tool/Function Calling, Gemini API, RAG, Fine-tuning, Embeddings, Transformers

Concepts : SEO/AEO/GEO Optimization, Atomic Stock Locks, Spending Guardrails, Human-in-the-Loop (HITL), Concurrency Control, REST APIs, Webhooks, JWT Auth, DSA
